

Rsam SOAR Solution (Security Operations Analytics and Reporting)

Leverage an Integrated Rsam SOAR Solution Suite or an Individual Module

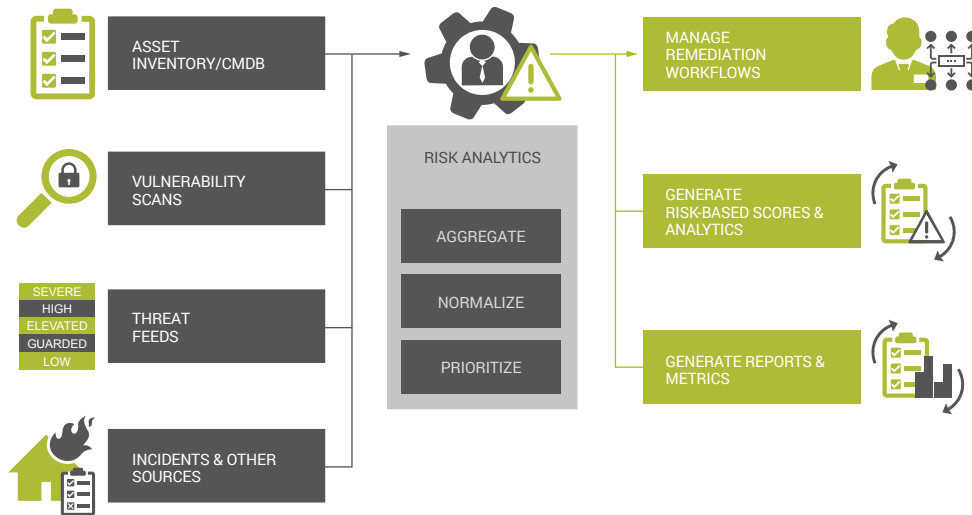

Rsam SOAR solution includes Threat Management, Vulnerability Management, and Security Incident Response modules. Customers can leverage the integrated solution or any one of the modules to get started.

Security monitoring tools and threat intelligence feeds are critical to your organization's information security program; however, the volume, variety and velocity of the data collected can be greatly overwhelming. Rsam Security Operations Analytics and Reporting (SOAR) is a web-based solution that cuts through the increasing volume of security operations Big Data to help you identify problem areas and enable you to take action before a security incident occurs.

Rsam SOAR solution creates a central repository of security operations data from disparate sources and allows you to aggregate analyze and manage data from any number of vulnerability scanners, inventory sources and intelligence feeds. Rsam SOAR factors in business impacts related to your organization to help prioritize remediation and ultimately improve your organization's security posture. Rsam provides businesses with an approach to security risk management that is proactive and aligned with business objectives, not just reactive and technology-focused.

Transform Security Operations Big Data into Actionable Intelligence

Key Features

- Establish a central repository of security operations Big Data from threat, vulnerability, incident, SEIM, patch management, asset management and many other sources of security operations data.
- Leverage prebuilt integration with industry leading tools and third party content.
- Prioritize remediation based on relevant risk data (criticality, compliance requirements, threats etc.) to determine appropriate action plans.
- Utilize Rsam’s unique universal connector to integrate with Rsam’s vast library of pre-built connectors, or create your own connections to any third party data source using a simple, ‘point and click’ user interface. Save and schedule imports to run automatically with no coding required.
- Easily configure dynamic rules to address your unique handling requirements and criteria, allowing you to automate appropriate actions and follow-ups.
- Standardize workflow, reporting and analytics with the flexibility to add or change tools over time, without disrupting your process.
- Create security performance metrics for the CSO of your ongoing security program. Create reports and dashboards using a simple ‘drag and drop’ user interface.
- Leverage the Rsam API for bidirectional integration to supporting systems, such as, ticketing, case management, ERP systems and others.

Rsam SOAR solution integrates with industry-leading tools, such as:

AppDetective
AppScan
IP360
McAfee Vuln Manager (Foundstone)
Nessus
NETIQ
Nexpose
Nmap

ArcSight
BigFix
NVD
QRadar
Qualys
RealSecure
Splunk
Tenable Security Center

BurpSuite
Fortify
Trustwave
US CERT
Veracode
WebInspect
WhiteHat Sentinel
and more

About Rsam

Rsam is the fastest time-to-value GRC, Vendor Risk Management and Security Operations, Analytics & Reporting (SOAR) platform provider with unparalleled flexibility. The Rsam platform allows for companies to leverage out-of-the-box solutions and “Build Your Own” (BYO) applications for a wide range of risk & compliance functional areas, including audit, business continuity management, compliance, enterprise risk, IT risk, incident management, operational risk, policy management, threat management, vulnerability management, security incident response management, vendor risk management, regulatory change management and more.
